

Hello,

The current folder contains the source code files. The files represent C&W white-box untargeted attack under  $L_\infty$  constraint.

The execution steps are as follows:

Step 1: You need to add the corresponding parameters to the "CW.py" and "C&W attack.py" files in both the targeted and untargeted attack subfolders under each norm constraint. For detailed setup instructions, refer to the instructions in the source code.

Step 2: You need to run "C&W attack.py" to execute the attack and generate adversarial samples.
